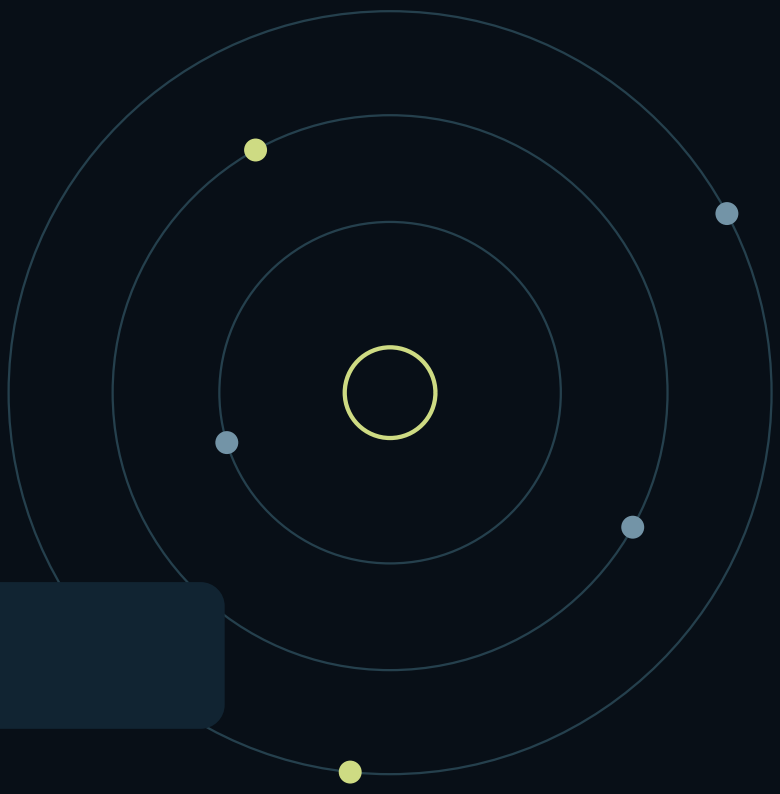
13 / WOLF ENGINE COLLECTION

WOLF ACQUIRE

An intelligent prospect-discovery and business opportunity engine. Find relevant companies, inspect public website evidence and prepare meaningful outreach for informed human review.



EVIDENCE BEFORE OUTREACH.

Discover. Audit. Qualify. Prepare. Review.

01 / PRODUCT IDENTITY

Discover stronger opportunities.

Wolf Acquire turns public business signals into a structured acquisition workspace. It builds an evidence-based brief before any decision to contact a company.

THE OPERATING IDEA

Not another list of names: each prospect can be connected to a real business website, a documented finding and a clear next step.

01

DISCOVER

Locate business websites from configured market and sector sources.

02

ASSESS

Review publicly available site structure and technical search signals.

03

PREPARE

Develop a tailored commercial conversation for owner review.

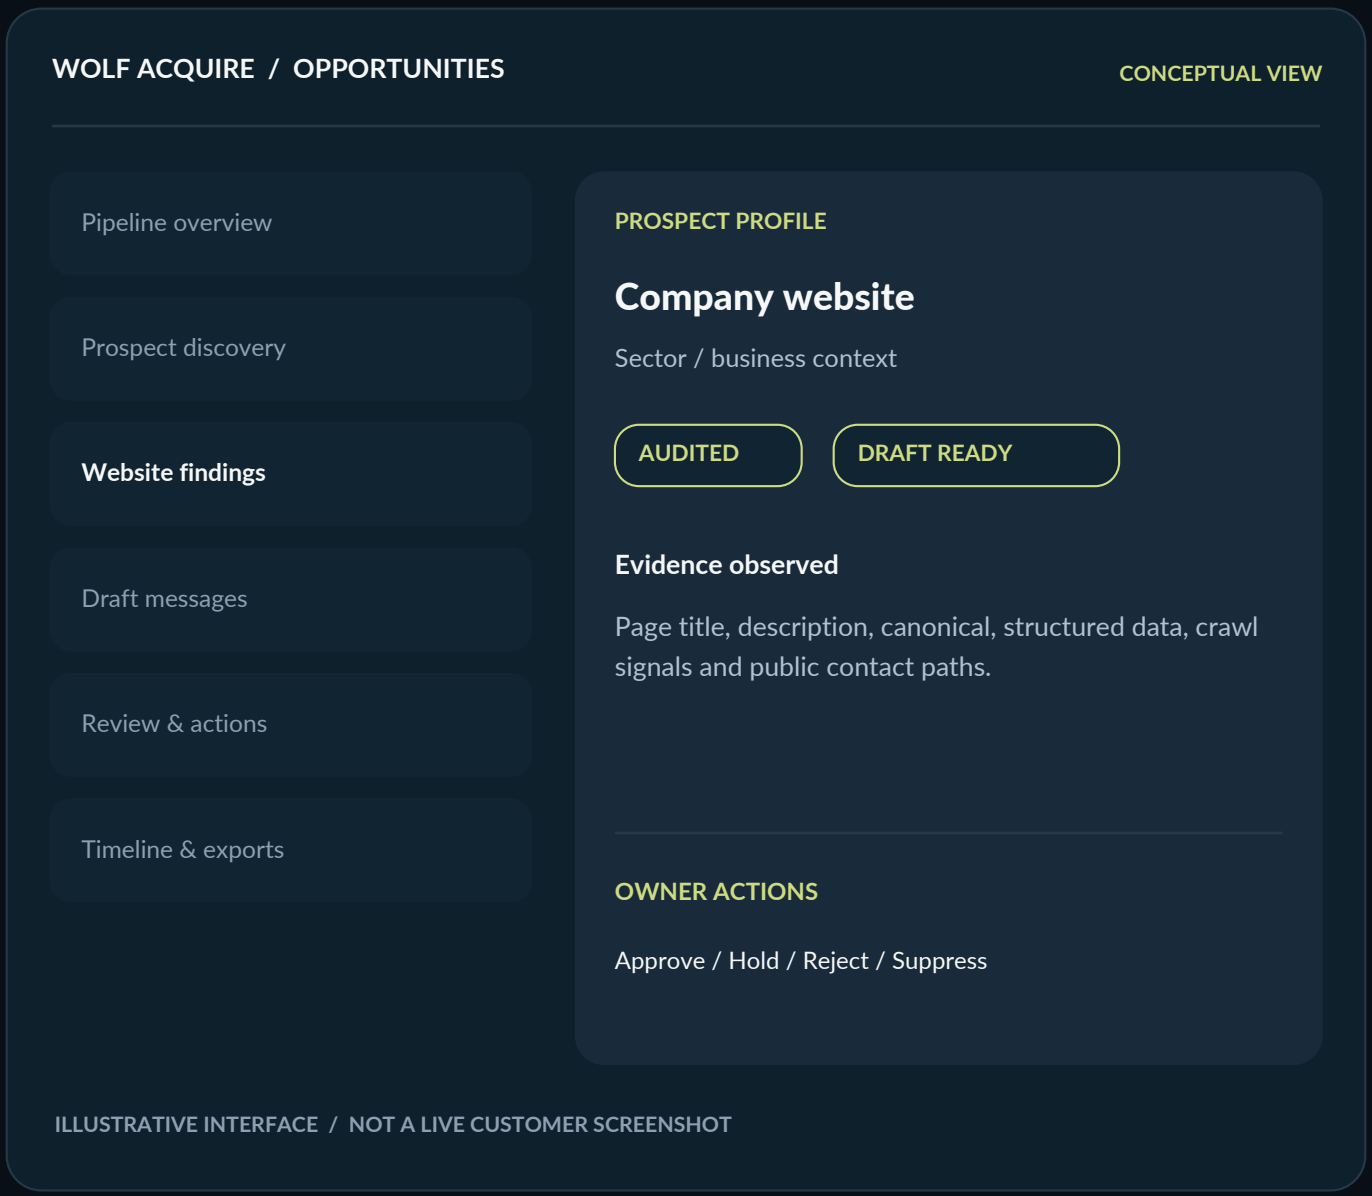
BUSINESS VALUE

A richer prospect profile, less blind outreach, a visible review trail and a professional first-contact draft grounded in the company's own published website.

02 / PRODUCT EXPERIENCE

The acquisition control room.

A focused workspace for navigating opportunities, reviewing findings and choosing the next owner-authorized action.



The control room is backed by prospect records, structured findings, message versions, notes, tags, review actions and exports.

03 / BUSINESS DISCOVERY

Find businesses worth understanding.

Wolf Acquire begins with business discovery, source context and domain hygiene rather than an unsupported estimate of who might buy.

01

LOCAL BUSINESS SOURCES

Collect relevant public business listings and website links from supported discovery sources and configured sectors.

02

SECTOR-AWARE SEARCH

Organize candidate companies by the commercial sectors represented in the deployment configuration.

03

DOMAIN NORMALIZATION

Resolve and normalize business website hosts so the same organization is not repeatedly added as a new lead.

04

PROTECTED BUSINESS BOUNDARIES

Exclude ignored or protected sources and avoid assuming every public record is appropriate for solicitation.

THE DIFFERENCE

Discovery produces candidates for assessment. It does not automatically mean an organization is qualified, interested or consenting to contact.

04 / WEBSITE INTELLIGENCE

Read the signals before the pitch.

The public website review identifies observable search and technical issues that can support a relevant, specific first conversation.

01

PAGE TITLES

Primary page title present and properly structured.

02

META DESCRIPTIONS

Page summary that helps explain the site to searchers.

03

CANONICALS

Signals used to identify preferred page URLs.

04

STRUCTURED DATA

Observable schema markup on the website.

05

SITE DISCOVERY

Robots and sitemap endpoints when available.

06

CONTACT PATHS

Public business email or contact route candidates.

EVIDENCE-LED INSIGHT

A website signal is not a confirmed loss of revenue or a verified Google ranking. The product describes only what its public checks actually observe.

05 / OPPORTUNITY QUALIFICATION

Turn findings into business context.

Wolf Acquire transforms public review findings into a structured profile so an operator can judge fit, relevance and the quality of the proposed conversation.

01

PROSPECT RECORD

Business name, sector, website and the source from which the company was discovered.

02

TECHNICAL FINDINGS

Recorded website signals, search opportunities and the issue selected for closer review.

03

PRIORITY AND STATUS

Assessment score and pipeline state organize review attention. The score is not a search-engine ranking.

04

CONTACT EVIDENCE

Published business contact information where available; visibility does not itself establish marketing permission.

05

QUALIFICATION DECISION

Owner review can retain, hold, reject or suppress records before a downstream activity is considered.

NO FALSE PRECISION

The operating logic supports prioritization. A score or website gap does not prove buyer intent or predict a sale.

06 / PERSONALIZED OUTREACH

A message backed by what was found.

Instead of sending identical promotional text to every address, Wolf Acquire prepares a business-specific explanation using the observed website signal.

EXAMPLE / DRAFT MESSAGE STRUCTURE

Subject

A specific visibility observation for your website

01 WHAT WAS REVIEWED

The publicly accessible business website and the exact page or technical signal considered.

02 WHY IT MAY MATTER

A calm explanation of the finding, without pretending to know private revenue, campaign results or customer losses.

REVIEWABLE DRAFT

Subject and body are saved as an editable, versioned work item.

CLEAR BOUNDARY

Review approval does not itself authorize or execute outbound sending.

PROFESSIONAL RULE

Clear evidence first. Relevant communication second. No generic scare tactics, invented traffic claims or automatic bulk outreach.

07 / OWNER CONTROL ROOM

Keep the human in command.

The operator receives organized opportunity records and explicit review tools, rather than surrendering prospect decisions to an opaque automation.

01

NOTES

Add internal context to a prospect without overwriting the original website finding.

02

TAGS

Classify records so sectors, status and priority can be reviewed consistently.

03

REVIEW ACTIONS

Approve a draft, hold a prospect, reject it or suppress future consideration.

04

MESSAGE HISTORY

Keep earlier versions of subject lines and body copy attached to the record.

05

EVENT TIMELINE

Examine the sequence of discovery, audit and review events.

06

FILTER & EXPORT

Use status filters and CSV export for controlled operational handoff.

DECISION OWNERSHIP

A saved owner action is a review decision. It is not evidence of a delivered email, a contacted lead or a closed deal.

08 / END-TO-END EXPERIENCE

From public discovery to a useful brief.

A practical operating journey shows where automated prospect intelligence ends and owner-authorized external activity would begin.

01 **DISCOVER**

Find an eligible business website from a configured market and sector.

02 **INSPECT**

Read public page evidence and record technical search signals.

03 **ASSESS**

Organize the finding, priority, contact paths and qualification state.

04 **DRAFT**

Prepare a business-specific message about the observable issue.

05 **REVIEW**

The operator can edit, approve, hold, reject or suppress the prospect.

06 **HAND OFF**

Export or coordinate approved information through a separately authorized workflow.

An illustrative capability path—not a claim that all downstream tools are automatically connected or that messages were sent.

09 / TRUST & GOVERNANCE

Commercial actions, under control.

The production acquisition module makes a useful distinction between researching a prospect and contacting one.

01

OUTREACH LOCK

The audited Acquire runtime has outbound sending disabled. Draft approval does not override that restriction.

02

SOURCE AND CONTACT DISCIPLINE

Keep public information traceable and protect blocked, irrelevant or suppressed records.

03

OPERATIONAL HISTORY

Event records, owner actions and message versions help preserve the reasoning behind a prospect decision.

04

ACCOUNT SECURITY

Authenticated portal access and request validation protect records and operator actions.

05

REPEATABLE OPERATION

A worker can discover, inspect and prepare records while the operator retains final review control.

EVIDENCE OVER PROMISES

No outcome guarantees, no automatic emailing claim, no fabricated customer findings, no implied third-party account access.

10 / WOLF ENGINE ECOSYSTEM

A specialized part of a wider system.

Wolf Acquire focuses on finding and preparing prospects. Other Wolf Engine products address different parts of business growth and management.

01

WOLF ACQUIRE

Public business discovery, website assessment, opportunity triage and reviewed first-contact drafting.

02

HOPE

Executive-led sales missions, contacting and follow-up workflows under their own authorizations and execution controls.

03

WOLF VISIBILITY

Organic search and AI-discovery measurement for a connected client website; not prospect acquisition.

04

WOLF OS

The company workspace for operational roles, tasks and management context where enabled.

05

WOLF MANAGEMENT

Owner-facing conversational command across permitted business workflows and exact tenant scopes.

CONNECTED BY DESIGN

These are distinct product roles. Cross-product automation is only represented as active when the selected tenant and integration are verified.

11 / PRODUCT PROFILE

Prospecting, with precision and control.

A purpose-built acquisition engine from Think Unlimited, with clear evidence, practical review workflows and strict external-action boundaries.

01

PRODUCT

Wolf Acquire — structured prospect discovery and public website opportunity intelligence.

02

OPERATING ENVIRONMENT

Web-based control room, authenticated API, scheduled acquisition worker and persistent records.

03

PRIMARY OUTPUTS

Prospect profiles, website findings, qualification status, draft messages, owner actions and CSV exports.

04

OWNER EXPERIENCE

Review sources, inspect evidence, adjust status, add notes, manage drafts and prepare a handoff.

05

SECURITY CONTROLS

Authenticated access, source scoping, protected records and outbound sending disabled in the audited module.

06

DEPLOYMENT MODEL

Operated through Think Unlimited and configured to the permitted source, market and account context.

THINK UNLIMITED / WOLF ENGINE

A stronger first conversation starts with evidence.
