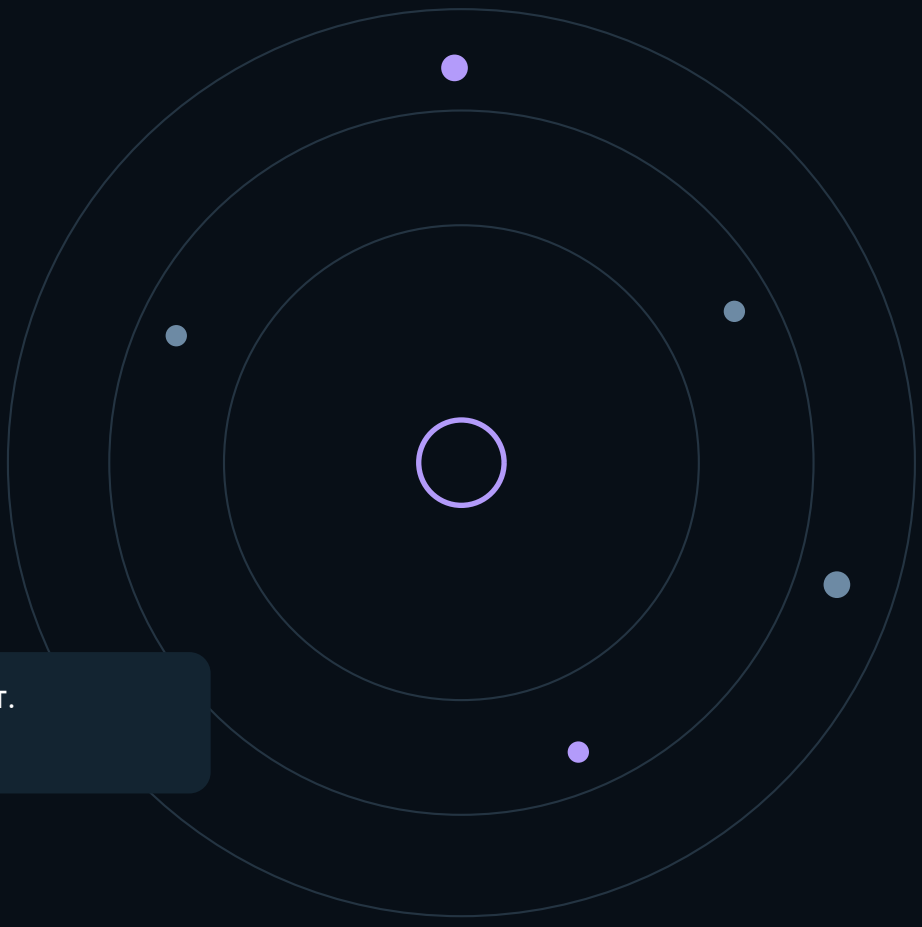
12 / WOLF ENGINE COLLECTION

WOLF AI AGENT

Your intelligent companion for conversation, live voice and authorized action. A premium mobile experience powered by Wolf Engine and built by Think Unlimited.



ONE ENGINE. ONE BUSINESS CONTEXT.

Specialized products. Connected by design.

01 / PRODUCT IDENTITY

An assistant that can act.

Wolf AI Agent brings conversational intelligence, live voice and controlled tool execution into one accessible experience.

ONE PERSONAL INTERFACE

Ask naturally. Speak live. Move from a question to a verified result when the relevant mission and access rights are enabled.

CONVERSATION

Questions, analysis, explanation and practical guidance.

LIVE VOICE

A more fluid, spoken interaction with Wolf.

MISSIONS

A structured request routed to authorized execution tools.

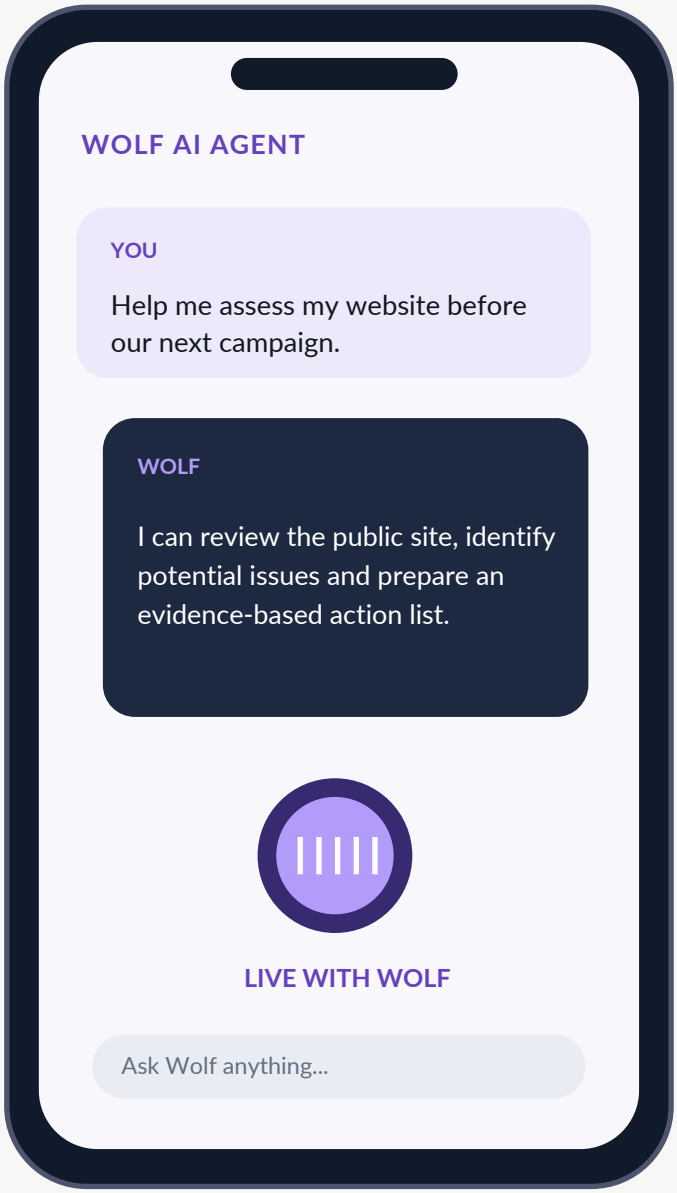
BUILT FOR EVERYDAY USE

A digital assistant can explain an issue in seconds. When a task requires records, accounts, a network check or a business change, Wolf uses the right permitted workflow rather than pretending it already happened.

02 / PRODUCT EXPERIENCE

Meet Wolf on your phone.

A focused mobile surface for text, speech, activity and clear results.



CONCEPTUAL PRODUCT VISUALIZATION

This illustration communicates the product experience. It is not a captured Android app screen; live controls and layout can vary by release, plan and device.

03 / LIVE CONVERSATION

Voice comes alive.

Real-time interaction makes Wolf feel like a conversational partner rather than a form or conventional menu.

LIVE WITH WOLF

Speak naturally. Let Wolf respond. Continue the conversation without switching to a different product for every question.

01

NATURAL TURN-TAKING

Move between questions, clarifications and follow-up instructions.

02

BEAST VOICE EXPERIENCE

Recognizable Wolf voice presentation, with settings controlled in the application.

03

TEXT + SPEECH

Choose the interaction that suits the moment; answers and mission states remain explicit.

04

CONNECTION-AWARE

Live voice depends on device permission, account access and network availability.

04 / AGENT INTELLIGENCE

From intent to evidence.

The AI core is paired with specialized tools. It reasons about the request, checks access and distinguishes an answer from an action.

01

UNDERSTAND

Interpret the user's question, goal and relevant context.

02

SELECT

Choose the appropriate expert capability or connected tool.

03

VERIFY

Inspect returned evidence, source scope and operational constraints.

04

RESPOND

Provide a useful answer, a proposed next step or a confirmed tool result.

Wolf can explain without a connected service. Actions involving external systems require the relevant account permissions and enabled capabilities.

05 / WOLF MISSIONS

Tell Wolf what to achieve.

Activated mission workflows turn a defined goal into trackable steps and tools, with safe control over sensitive actions.

EXAMPLE REQUEST

“Audit my business website, explain the risks and prepare a prioritized repair plan.”

01 **MISSION**
Understand the goal and target

02 **SCOPE**
Check identity and access

03 **TOOLS**
Run permitted checks

04 **RESULT**
Show findings and evidence

05 **ACTION**
Request required approval

06 / CYBER COMMAND

Secure tools, real boundaries.

Wolf AI Agent includes a cybersecurity command capability for explicitly authorized assets and controlled security assessments.

01

AUTHORIZED SCOPE

Targets are checked against registered, permitted assets. Unknown or unrelated domains are not automatically eligible.

02

SECURITY SURFACE

Discover and inspect approved web and infrastructure exposure using bounded assessment profiles.

03

INTELLIGENCE OUTPUT

Transform verified technical observations into understandable findings and recommended next steps.

04

SAFER EXECUTION

Restrictions protect against intrusive exploitation, brute-force attempts, denial-of-service behavior and unapproved scans.

Cyber Command is not a license to inspect third-party systems. Permission, scope and platform safety rules govern each assessment.

07 / EVERYDAY USE CASES

A practical AI at work.

Wolf can be an everyday thinking partner and, where connected and enabled, a controlled task operator.

RESEARCH

Investigate

Compare information, identify issues and develop a clear set of decisions.

WEBSITES

Examine

Review permitted websites, digital presence and technical observations.

CYBERSECURITY

Assess

Work with authorized assets and translate security findings into action.

OPERATIONS

Organize

Structure a request into a mission, plan or reviewable follow-up.

BUSINESS

Advise

Reason about priorities, workflows and the next best documented action.

TOOLS

Coordinate

Use connected tools in their granted scope, with clear limits and results.

Examples describe product use cases, not unverified claims that every service is connected for every account.

08 / ACCESS & ACTIVATION

Start simply. Grow with Wolf.

The product separates introductory interaction from enabled mission execution, so users understand the capabilities available to them.

01 GET THE APP

Open Wolf AI Agent on a supported Android device through the available distribution channel.

02 CREATE YOUR IDENTITY

Sign in to establish an account and its applicable access, plan and session state.

03 EXPERIENCE WOLF

Start with introductory conversation and explore the text or live voice experience.

04 ACTIVATE CAPABILITIES

Mission features become available according to activation, entitlement and permitted tools.

05 USE WITH CONTROL

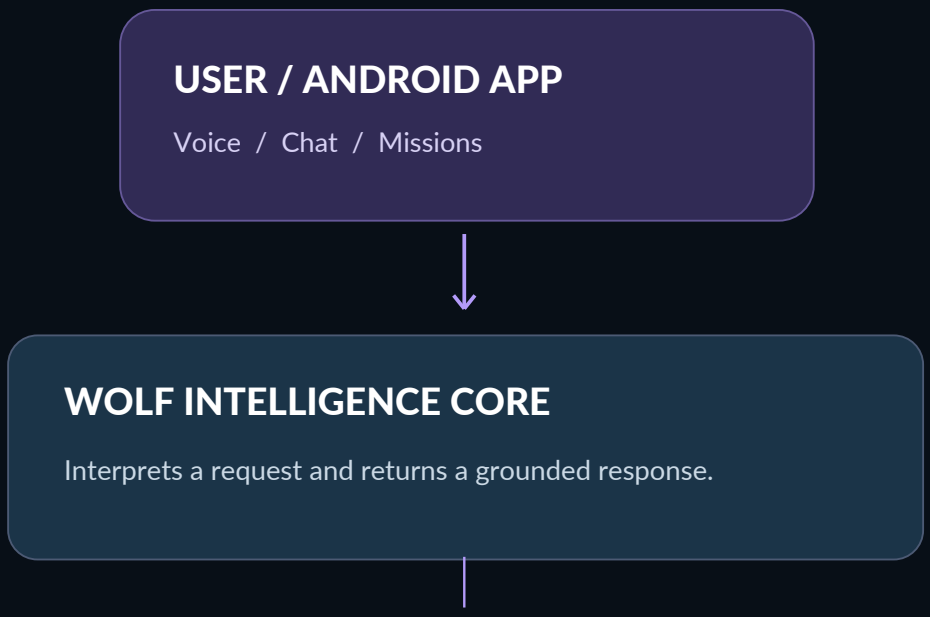
Review task states, ask for explanations and authorize protected actions where required.

Available introductory usage, voice access and mission entitlements are shown by the product's current account plan and activation state.

09 / CONNECTED ARCHITECTURE

One app. Many capabilities.

Wolf AI Agent uses dedicated services for conversation, realtime voice, account entitlement and controlled tools.



LIVE VOICE

Realtime conversation services

TOOLS

Authorized integrations and task routing

IDENTITY

Subscription and access controls

WOLF ENGINE ECOSYSTEM

Connection to a company workspace or other Wolf Engine service is governed by the relevant subscription, authentication and live integration. An app install alone does not grant access to a business account.

10 / TRUST & SECURITY

Capability with accountability.

Strong AI experiences must remain transparent about account boundaries, evidence and actions that affect the outside world.

IDENTITY & ACCESS

Account-specific privileges and mission entitlements keep advanced functions behind the appropriate activation.

APPROVED TOOL USE

Execution depends on accessible tools, defined target scope and permissions granted through the right provider or owner.

EVIDENCE & HONESTY

A generated suggestion is not presented as a completed website repair, delivered message or finished business operation.

CYBER SAFETY

Security testing follows limited assessment profiles and permission checks rather than unrestricted intrusion.

CLEAR RESULTS

The product can describe what was checked, what it found, and where a further decision or human approval is needed.

11 / PRODUCT PROFILE

The wolf in your pocket.

Conversation meets capability, with a clear distinction between intelligence, access and real-world execution.

EXPERIENCE	Text chat and real-time voice
VOICE	Wolf voice modes, including Beast settings
INTELLIGENCE	Reasoned answers and expert tool routing
MISSIONS	Controlled goal-to-task orchestration
SECURITY	Permission-scoped Cyber Command
ACCOUNT	Activation and entitlement-aware access
ECOSYSTEM	Connects to authorized Wolf tools and services
