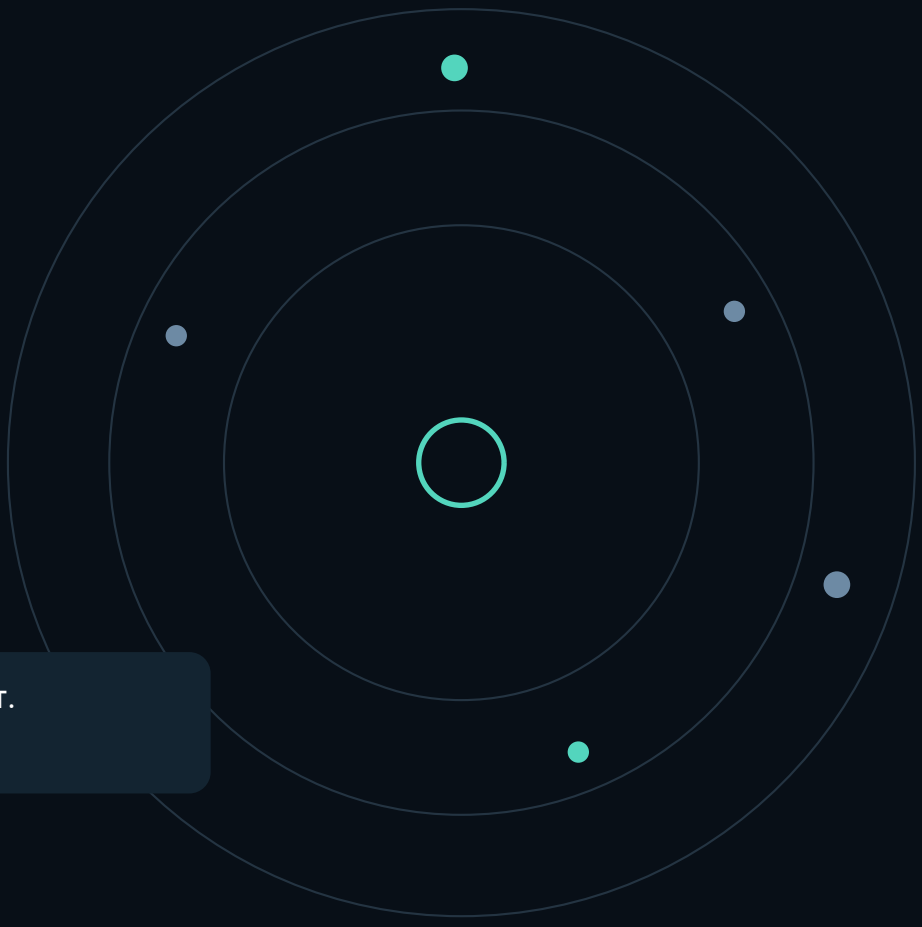
02 / WOLF ENGINE COLLECTION

WOLF MANAGEMENT

Your business, one conversation. A secure command experience inside ChatGPT for connected customer, finance, team, marketing and operational records.



ONE ENGINE. ONE BUSINESS CONTEXT.

Specialized products. Connected by design.

01 / THE OWNER INTERFACE

Speak to the business.

Wolf Management gives the owner a conversational entry point to authorized information and permitted actions.

CHATGPT / WOLF MANAGEMENT

OWNER REQUEST

“What happened in my business today? Show overdue work, unpaid invoices and customer requests.”

WOLF CHECKS THE AUTHORIZED RECORDS

01 Confirm company and access

02 Retrieve documented activity

03 Flag missing or disconnected data

04 Prepare approval-controlled next steps

NOT A REPLACEMENT FOR THE BUSINESS DATABASE

Records remain in the authorized company systems. Wolf Management is the secure conversational layer that reads and acts within those permissions.

02 / BUSINESS COMMAND COVERAGE

One conversation. Real records.

Dedicated Wolf Management backend tools cover everyday information requests and controlled business actions.

01

Customer 360

Customer identity, history, linked service records and follow-up context.

02

Finance

Invoices, balances, quotations and approval-controlled transactions.

03

Operations

Service requests, jobs, attention items and operational priorities.

04

Inventory

Stock balances, warehouse data and logistics records where maintained.

05

Marketing

Brand-grounded content drafts, plans and owner approval queues.

06

Documents

Templates, quotations and connected company document workflows.

AVAILABLE OUTPUT DEPENDS ON COMPANY RECORDS, ACCESS RIGHTS AND CONNECTORS.

03 / AI LEADERSHIP LAYER

A team of specialist modes.

Role-specific management interfaces share the same secure tenant-scoped system; they are not independent human employees.

WOLF
Chief of Staff
Priorities and routing

CEO
Executive
Business-wide oversight

SALES
Sales & Revenue
Leads and quotations

FINANCE
Finance Director
Balances and approvals

OPS
Operations Director
Jobs and service requests

LOGISTICS
Logistics

Verified search evidence

BROADCAST
Communications
Consent-aware outreach

CYBER
Security & Risk
Authorized oversight

Director modes use verified connected tools. A role name alone does not grant posting, spending or customer-contact permissions.

04 / SAFE EXECUTION

From instruction to action.

Business changes follow an auditable sequence instead of silently altering live records.

01 **UNDERSTAND**

Identify intent and authorized tenant.

02 **CHECK**

Read sources and validate required facts.

03 **PREPARE**

Create a reviewable draft or proposed change.

04 **APPROVE**

Require the correct person’s authority.

05 **EXECUTE**

Perform only permitted and confirmed live action.

Approvals protect financial operations, publishing, messaging and other sensitive changes. TEST and LIVE are never the same state.

05 / CUSTOMER & FINANCE

From a client question to a draft.

Customer records, verified prices and approval flows let the owner coordinate commercial work conversationally.

OWNER REQUEST

“Find this customer, show the last job and prepare a quotation for the requested service.”

01

Customer

Look up related customer and service context.

02

Commercial facts

Check accepted catalogue and pricing inputs.

03

Document

Prepare a quotation with correct entity, terms and currency.

04

Owner review

Require approval before a protected action proceeds.

The workflow should never invent prices, transactions, sent emails or customer outcomes. Real records, scope and approval determine the result.

06 / MARKETING OPERATIONS

Plan. Draft. Review.

Content creation becomes part of an accountable business workflow, not an unchecked publishing bot.

01

Brief

Use the company identity, product/service catalogue, market and objective.

02

Create

Produce drafts, campaign ideas and a proposed editorial plan.

03

Review

Revise content and submit the exact draft for owner approval.

04

Publish - if authorized

Only a verified provider connection and explicit approval can permit live publishing.

Connected social accounts, content production and publishing permissions are independent capabilities.

07 / WOLF ENGINE ARCHITECTURE

The owner layer meets the OS.

Wolf Management presents one interface; Wolf OS and other connected engines supply the authorized business evidence.

OWNER / CHATGPT

WOLF MANAGEMENT

Search evidence

BROADCAST

Authorized messaging

Connected product listings are not proof of access. Each company requires its own activation, entitlement and verified API or account authorization.

08 / CONTROL & TRUST

Business access is earned.

Each command is scoped to a specific company identity, permitted data sources and the right approval process.

01

TENANT BOUNDARY

Customer and operational records are selected using the authorized company context.

02

SEPARATE CONNECTIONS

Google, Meta and optional products require their own verified integration and granted access.

03

WRITE CONTROL

Sensitive production changes use preparation and approval gates before execution.

04

EVIDENCE / AUDIT

Do not present test output, unmeasured data or unconfirmed sending as completed live actions.

HUMAN ACCOUNTABILITY IS PART OF THE PRODUCT EXPERIENCE.

09 / PRODUCT SPECIFICATION

An executive control product.

The commercial offer combines tenant-scoped business capabilities, connected tools and optional supervised services.

CUSTOMERS	Records, lookups and Customer 360	Registered tools
FINANCE	Invoice balances, quotation drafts	Registered tools
OPERATIONS	Jobs, stock, tasks and attention	Registered tools
EXECUTIVES	Role-specific director modes	Backend role profiles
CREATIVE	Content drafts, approvals, documents	Module & consent dependent
CROSS-ENGINE	All-systems owner missions	End-to-end QA pending

COMMERCIAL STRUCTURE

Management subscription, connected workspaces, optional premium services and onboarding. Final commercial terms depend on the applicable client agreement.
