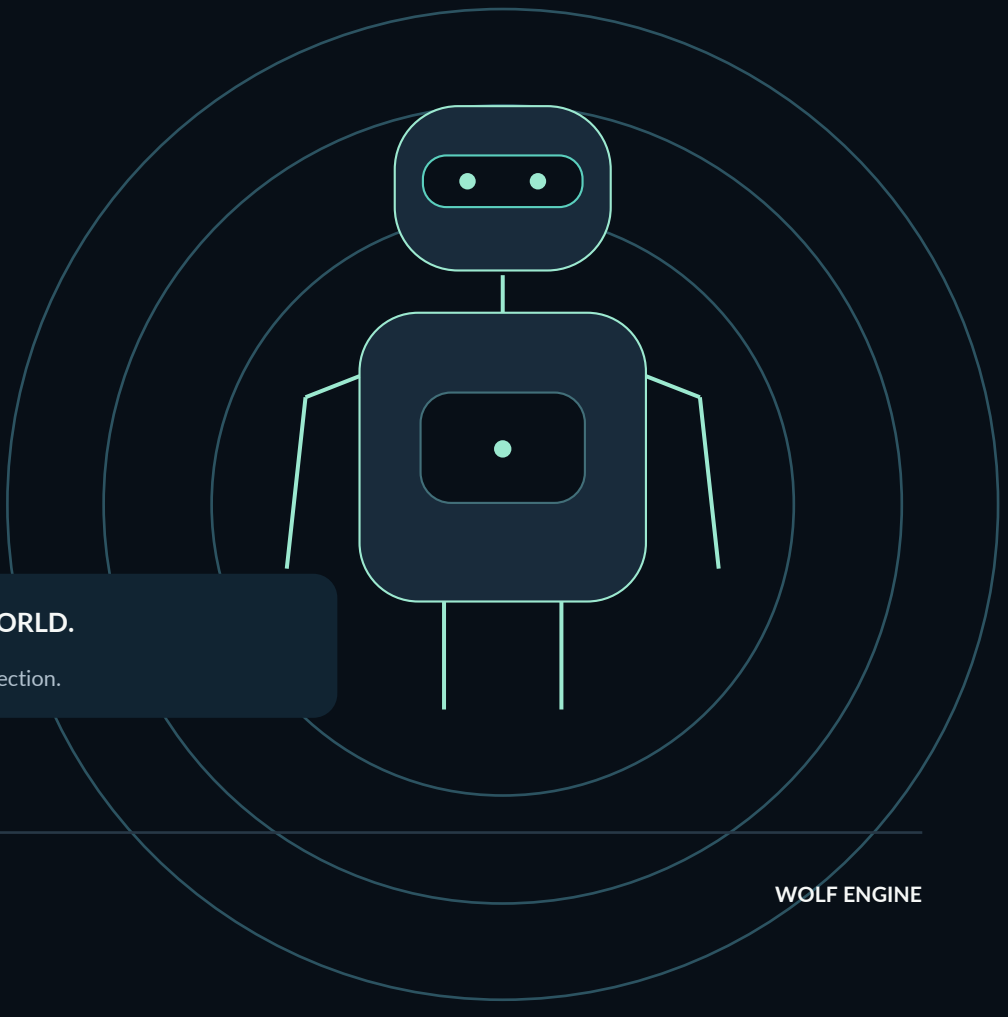
14 / WOLF ENGINE COLLECTION

WOLF ROBOT

A new physical presence for intelligent business service. A complete robot solution sourced, configured and connected by Think Unlimited.



INTELLIGENCE, IN THE REAL WORLD.

Robot. Voice. Knowledge. Business connection.

01 / PRODUCT IDENTITY

Physical intelligence.

Wolf Robot brings the Wolf Engine experience into physical spaces: a supplied humanoid robot platform, configured for a defined business environment and a carefully designed visitor interaction.

THE COMPLETE SOLUTION

Think Unlimited provides the robot solution, engineers the intelligence layer and prepares the approved interaction for the customer environment. The client does not need to arrive with a robot.

01

PHYSICAL PRESENCE

A distinctive robotic interface for controlled customer-facing environments.

02

WOLF INTELLIGENCE

Voice-led questions, approved knowledge and guided business interactions.

03

IMPLEMENTATION

Hardware selection, configuration, supervised commissioning and operator handover.

THE VALUE

A premium brand experience that can welcome visitors, explain services and help people connect with the right human team - in a more memorable format.

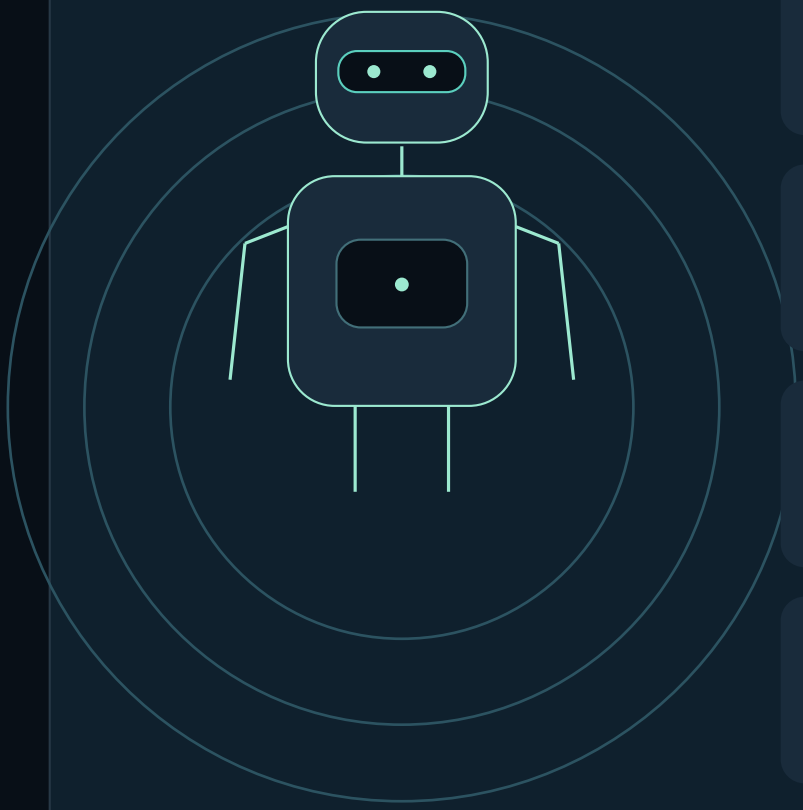
02 / EXPERIENCE

An encounter with Wolf.

The robot is the physical interface. Wolf Engine provides the guided intelligence, business identity and governed connection behind a customer conversation.

A CUSTOMER JOURNEY

ILLUSTRATIVE EXPERIENCE



01 / WELCOME

The visitor meets a clear, branded introduction.

02 / CONVERSE

Wolf interprets a question in the enabled language.

03 / GUIDE

Approved information is explained in plain language.

04 / HAND OFF

A human takes over when judgment or action is needed.

Experience flow shown for presentation purposes. Robot gestures, voice, mobility and handoff behavior depend on the selected hardware and signed deployment scope.

03 / SERVICE CAPABILITIES

Built around the moment.

A physical AI solution is most valuable when each interaction serves a clear human, commercial or operational purpose.

01

VISITOR WELCOME

Introduce a venue or organization in an engaging, consistent brand voice.

02

BILINGUAL ASSISTANCE

Structure Arabic and English interactions around the business knowledge provided.

03

SERVICE EXPLANATION

Present approved services, opening information and next steps.

04

GUIDED PRESENTATIONS

Support a defined demonstration, event or product-introduction script.

05

QUESTION ROUTING

Identify questions requiring staff expertise and route them appropriately.

06

BUSINESS HANDOFF

Prepare a permitted request or follow-up pathway for a human team.

CONTROLLED EXPERIENCE

Each capability is configured against an approved script, integration, hardware model and operating environment; no unrestricted physical autonomy is implied.

04 / WOLF ENGINE INSIDE

A brain with boundaries.

The value of Wolf Robot is not only appearance or motion. Its differentiation is a grounded, governed AI experience created for the business.

01

BUSINESS KNOWLEDGE

Company services, policies, locations, approved answers and operating rules form the specialist knowledge base.

02

VOICE AND LANGUAGE

Speech interaction is designed for the target audience and tested for clarity in the relevant languages.

03

ROLE-BASED INTELLIGENCE

The robot follows a defined assignment such as reception, welcome, product explanation or event assistance.

04

HUMAN ESCALATION

Unknown facts, exceptions or sensitive questions return to a staff member instead of prompting invented answers.

05

AUTHORIZED CONNECTIONS

Selected workflow integrations may be enabled only within the customer-approved permissions and project scope.

INTELLIGENCE IS NOT UNLIMITED ACCESS

Physical presence never gives the robot permission to see private business records, approve payments or initiate sensitive actions without the required controls.

05 / ROBOT PLATFORM

Designed for the real environment.

Think Unlimited coordinates the robot platform and its intelligence package together, so physical characteristics are evaluated against the intended location and job.

01

FORM & PRESENTATION

Humanoid appearance, finish and branded presentation suited to the venue.

02

SENSING & INTERACTION

Camera, microphone, speaker and sensing options assessed against the chosen platform.

03

MOVEMENT & GESTURES

Motion is limited to validated actions and the safe operating envelope of the hardware.

04

POWER & SPACE

Charging, floors, routes, lighting, network and space are reviewed before deployment.

05

OPERATOR CONTROLS

Staff access, manual stop paths and supervision requirements are specified for the installation.

06

SERVICEABILITY

Maintenance, replacement parts and vendor support are considered during hardware selection.

SPECIFICATIONS VARY BY CONFIGURATION

Hardware performance, delivery terms and advanced functions are documented for each selected model - never assumed from a generic robot demonstration.

06 / BUSINESS USE CASES

A new face for your brand.

Wolf Robot is designed around defined customer experiences rather than open-ended autonomous operation in uncontrolled settings.

01

SHOWROOMS & RETAIL

Welcome customers, explain product categories and direct visitors to a specialist.

02

EXHIBITIONS & EVENTS

Deliver scheduled introductions, event information and guided interactive demonstrations.

03

HOTELS & HOSPITALITY

Help guests discover permitted venue information, amenities and service routes.

04

OFFICES & RECEPTION

Explain who the business is, present basic directions and support reception triage.

05

EDUCATION & SHOWCASES

Provide a supervised demonstration of practical AI, robotics and human-robot interaction.

INDUSTRY-SPECIFIC SAFETY

Regulated topics and high-stakes decisions stay with qualified personnel. The robot is an assistant - not a replacement for professional judgment.

07 / DELIVERY MODEL

We bring the complete system.

A customer engages Think Unlimited for the robot experience; our team coordinates hardware selection, Wolf Engine configuration, commissioning and handover.

01

01 / DISCOVER

Clarify the venue, target audience, use cases, staff ownership and permitted interaction boundaries.

02

02 / SELECT

Choose a compatible robot platform for the physical requirements and project scope.

03

03 / ENGINEER

Prepare business knowledge, conversational paths, voice experience, integrations and operator controls.

04

04 / TEST

Validate expected responses, approved gestures, escalation, network readiness and safe operating conditions.

05

05 / HANDOVER

Commission the agreed configuration, orient the responsible staff and establish an ongoing support path.

ONE ACCOUNTABLE DELIVERY PARTNER

The customer receives a coordinated robotics solution, rather than having to procure independent hardware and assemble a disconnected AI stack.

08 / SAFETY & GOVERNANCE

Intelligent. Supervised. Responsible.

A robot working around people needs clearly defined behavior, bounded autonomy and dependable operational safeguards.

01

HUMAN OVERSIGHT

A responsible operator controls startup, supervision and intervention.

02

MOTION LIMITS

Physical behavior is validated against the selected model and safe deployment zone.

03

TRUTHFUL ANSWERS

Business claims come from approved information; uncertainty triggers handoff.

04

PRIVACY BY DESIGN

Collection of voice, image or customer information requires clear purpose and controls.

05

INTEGRATION BOUNDARIES

Connected systems are limited to approved roles and minimum required permissions.

06

INCIDENT RESPONSE

The site needs defined procedures for faults, interrupted connectivity and safe stopping.

A HUMAN-CENTERED SYSTEM

Robot deployment requires on-site assessment and supervised acceptance. AI assistance does not equal unsupervised physical autonomy.

09 / EXPERIENCE DESIGN

One platform, different roles.

Wolf Robot is configured to represent the customer and answer the questions that matter in each environment.

THREE EXAMPLE EXPERIENCES

A / THE RECEPTION EXPERIENCE

A visitor arrives. Wolf introduces the organization, shares permitted directions and helps connect them with the responsible employee.

B / THE BRAND SHOWCASE

At an exhibition, Wolf presents approved talking points, explains a solution and invites the visitor to continue with a human representative.

C / THE CUSTOMER GUIDE

In a retail setting, Wolf answers basic category questions and helps visitors find the right sales advisor, without making unsupported claims.

DESIGNED, NOT ASSUMED

These are proposed interaction patterns. Each deployment is configured and validated for the selected robot and business.

10 / ECOSYSTEM POSITION

The physical layer of Wolf Engine.

Wolf Robot extends a specialized digital intelligence stack into face-to-face customer interactions, under appropriate permissions.

01

WOLF ROBOT

The supplied physical interface: human-robot interaction, voice experience and on-site service role.

02

WOLF AI AGENT

The conversational and role-based intelligence used to shape a governed interaction.

03

WOLF OS

The business operating workspace for permitted requests, assignments and team follow-up.

04

WOLF MANAGEMENT

Owner-level management and oversight for business workflows, where separately enabled.

05

WOLF CYBERSECURITY

Security expertise supporting controlled devices, business connections and safe operations.

ONE ENGINE, CLEAR PERMISSIONS

Related Wolf Engine products are complementary. Connections are scoped, approved and verified for each project; they are not universally active by default.

11 / PRODUCT PROFILE

Meet the next presence.

A premium humanoid-robot experience engineered around business identity, useful dialogue and responsible deployment by Think Unlimited.

01

SOLUTION

Wolf Robot - supplied robot platform with a tailored Wolf Engine interaction layer.

02

CUSTOMER

Organizations seeking a distinctive, supervised welcome or service experience.

03

INTERFACE

Voice-led guidance, approved business knowledge and model-dependent motion.

04

DEPLOYMENT

Hardware selection, configuration, testing, operator handover and support scope.

05

CONTROL

Human ownership, defined roles, supervised operation and permission gates.

06

AVAILABILITY

Project-specific quotation and feasibility review before any hardware or integration commitment.

THINK UNLIMITED / WOLF ENGINE

The future of interaction starts with a real conversation.
